EIN-SOF Electronic Medical Records Management System (EMRMS)

Dignified and enjoyable experience in caring for patients.
Because life matters.
Discover the new perspective of e-Healthcare and experience your work like you never had before.

The EMRMS application gives you a unique approach to your daily tasks, in a much more organized, cost effective, time saving, and fully operational manner with the single purpose of satisfying your requirements and providing all the necessary time to complete a professional engagement.
The ergonomic medical health care system broken down to the simplest but powerful user friendly environment.

Ein-Sof has extended experience in the development and implementation of e-Healthcare solutions, built on a synergetic system that combines the medical expertise of doctors with the technical expertise of software developers.
The solution includes input from a team of doctors with a variety of expertise in clinical operations, as well as in consultancy for Hospital Information Systems. This team is involved throughout the design and the implementation activities, providing a software solution with the highest levels of performance and information management.

Bringing together the best of both worlds, it is a flexible structure that guarantees implementation of best practices in the operation of the hospital information system as well as providing valuable data to the client.

Dignified and enjoyable experience in caring for patients >>

Discover the new perspective of e-Healthcare and experience your work like you never had before >>

FEATURES/FUNCTIONALITIES

Electronic Medical Records Management System (EMRMS) offers full integration and support with your needs in mind to work faster and more organized with razor sharp precision through:

1. Front desk "intake"

Benefit from the time saving that EMRMS offers:

- The intake module in the application allows a patient to be recorded in few simple steps.
- Recording the pertinent information: Patient demographics, injury description and body parts affected by the injury, employer, payer, applicant attorney etc.
- Each patient's injury can be recorded with a few simple clicks through various statuses of the affected body parts.
- The application displays all necessary information in organized fashion,
- The easiest scheduling tool you've ever seen.

2. Management of Resources

Technology management that can deliver measurable business results

The scheduler is a custom built tool to satisfy the needs of the medical industry.
The largest benefits are:
- Easy access to the data
- Quick preview browsing of existing appointments using a week or day view
- Easy scheduling and rescheduling using standard drag and drop procedures
- No longer miss appointments or overlapping
- Clean view with easy access, automatic notifications, and custom configuration with colorful presets
- The custom colors allow quick distinguishment between appointments
- Simple task assignments to a staff member: clinic/department and a doctor, select start and end time, assign a patient and select injury.

Because life matters >>

3. Medical Records

EMRMS -Cost reduction application and improvement quality of service:

- Enter and preview all of the patient's data, their history, their vitals, check on the work status, prescribe medications
- Configure and preview the patient's complaint
- Simple comparison and configuration between: doctors's provided diagnoses, treatment plan and progress
- Automatic triggers and suggestions recommended for each patient's treatment.
- Follow-up appointment or therapy.
- Track all patient allergies and any special needs.

4. Reporting and searching

EMRMS - Be as creative as you can be in your inquiry and always get the information you are looking for:

- Simple set of speed, quality and data integrity.
- Compile reports:
    * generate monthly staff reports,
    * work productivity,
    * prescribed medications,
    * patients,
    * operations,
    * documents,
    * injuries etc.
- The output format is supported on:
    * screen display,
    * print and electronic document format PDF,
    * spreadsheets etc.
- Unique searching system that provides you unlimited combinations while composing your inquiry via properties and logical operands link.

5. Document management system and Order Referrals

EMRMS - Always provides punctual data and lets you do even more:

- Follow each patient's treatment plan based on the workflow of your health care system.
- With a single click the patient's records can be transferred to the sub applications for Surgery, MRI, NCV/EMG, Psych, Physical Therapy etc..
- Automated applications monitor the status of the patient's records and the approval process
- This document management system provides a single point of view in the advancement of each record.
- Keeps you notified using the automatic email notifications for each phase.

6. Administration

EMRMS - Giving you more time to do what you do best

- Powerful administration support.
- Over 50 sub modules which offer real time data editing that supports the front end of the application.
- Custom configurations, adding new data, updating existing data, removing unnecessary data, and creating custom rules for diagnosis reports
- Custom access to every user involved in the application and set restrictions.
- Super User full access
- Quick and easy way to add new data entry: regulations, diagnosis, objectives, subjective, locations, doctors, medications, procedures, referrals, services, body parts, etc.

STANDARDS HL7 and HIPAA

EMRMS had been primarily built for the United States Medical Health Care System, thus it follows the basic Hl7 and HIPAA standards.
This standard provides the security, integration of the data, standardization of the data format etc. making it a regulation system approved.
EMRMS application is 100% flexible to meet your specific needs thus it can meet your custom requirements or your country's regulations in which your health care system is settled.
